Appendix I: Declaration on Use of GAI (Generative Artificial Intelligence) Assistance in relation to Assignment/Project (to be submitted individually even for group projects)

I Teo Soon How (student name), TEOS0077e.ntu.edu.sg (NTU email) honestly and sincerely make the following declaration in relation to the following course submission:

1. Name of course: Object Oriented Design & Programming
2. Course Code: CT2003
3. Instructor: Dr. Li Fang
4. Title of Assignment/Project Submission: Restaurant Rush Group Attendance

In relation to the foregoing I hereby declare that, fully and properly in accordance with the Assignment/Project Instructions I have (check where appropriate):

i. Used GAI as permitted to assist in generating key ideas only. ☑

ii. Used GAI as permitted to assist in generating a first text only. ☑

And/or

iii. Used GAI to refine syntax and grammar for correct language submission only. ☑

Or

iv. As it is not permitted: Not used GAI assistance in any way in the development or generation of this assignment or project. ☐

I also declare that I have :

a. Fully and honestly submitted the digital paper trail required under the assignment/project instructions; and that
b. Wherever GAI assistance has been employed in the submission in word or paraphrase or inclusion of a significant idea or fact suggested by the GAI assistant, I have acknowledged this by a footnote; and that,
c. Apart from the foregoing notices, the submission is wholly my own work.

_____Teo Soon How____

(Optional) Sample Reflection Questions:

In 150 words or less, briefly state up to 5 key ideas that you formulated that the GAI tools alone could not have generated.

1. Kept my code to control/ only. I owned GameController, GameConfig, Arrival and HappyHour. Teammates' classes were used only through their own methods (chooseItem, applyDiscount, getCashier, PricingPolicy).
2. Set the project code rules. ECB packages, money held as int cents, no System.out or Scanner outside boundary, and later stages extend the design instead of rewriting it.
3. A stage is tagged only if it passes its checks. Each tag had to compile, pass every check in testing/, and win and lose its replay runs.
4. Chose where the Critic arrives. From the options given, I picked turn 10 in Stage 2 and turn 7 in Stage 3, so his dish differs from the default (id − 1) mod menu size rule.
5. Chose the merge order. I merged teammates' branches into mine before writing my code, so my code was built against their real classes.

Identify the key facts generated by the GAI tools and briefly describe how you have verified them.

1. **Winning move lists and results**
    - Stage 1: 5 paid, $66.00, average 79.
    - Stage 2: 5 paid, $73.50, average 76.

I ran the replay input files with java -cp out Main on each stage tag and compared the final results.

2. **Locked order prices**
    - VIP Burger: $13.50.
    - In Happy Hour: VIP Burger $10.80, combo $19.44.

I checked them by hand against Money.percentOf and PricingPolicy, and with GameControllerCheck, which prints OK or FAIL for each price.

3. **Turn rules:**
    - a dish READY this turn is served next turn;
    - one payment per turn;
    - Happy Hour lasts 2 turns.

I ran GameControllerCheck and confirmed every line printed OK.

4. **Build and documentation status** (compiles cleanly, all checks pass, 0 Javadoc warnings): I compiled with javac, ran every class in testing/, and ran javadoc -Xdoclint:all myself.
5. **Repository facts in the slides and report** (class count, PR numbers, quoted commit messages): checked against git log and the pull requests on GitHub.
