Appendix I: Declaration on Use of GAI (Generative Artificial Intelligence) Assistance in relation to Assignment/Project (to be submitted individually even for group projects)

I Muhammad Kenz S/O Jafar (student name),
c260015@e.ntu.edu.sg (NTU email) honestly and sincerely make the following declaration in relation to the following course submission:

1. Name of course: Object Oriented Design & Programming
2. Course Code: CT2003
3. Instructor: Li Fang
4. Title of Assignment/Project Submission: Restaurant Rush Group Assignment

In relation to the foregoing I hereby declare that, fully and properly in accordance with the Assignment/Project Instructions I have (check where appropriate):

i. Used GAI as permitted to assist in generating key ideas only. ☑

ii. Used GAI as permitted to assist in generating a first text only. ☑

And/or

iii. Used GAI to refine syntax and grammar for correct language submission only. ☑

Or

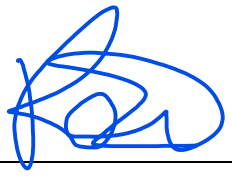

iv. As it is not permitted: Not used GAI assistance in any way in the development or generation of this assignment or project. ☐

I also declare that I have :

a. Fully and honestly submitted the digital paper trail required under the assignment/project instructions; and that

b. Wherever GAI assistance has been employed in the submission in word or paraphrase or inclusion of a significant idea or fact suggested by the GAI assistant, I have acknowledged this by a footnote; and that,

c. Apart from the foregoing notices, the submission is wholly my own work.

Muhammad Kenz S/O Jafar — 13/11/2026

(Optional) Sample Reflection Questions:

In 150 words or less, briefly state up to 5 key ideas that you formulated that the GAI tools alone could not have generated.

1. I suggested merging InputReader into ConsoleUI because both dealt with the console. The final design has only one class reading input, which is what fixed the replay files.

2. I asked whether Host should extend Waiter, since both seat customers. Working out why it shouldn't (it would inherit takeOrder() and serve()) became the alternative design in my design discussion.

3. For the one-action rule in Staff, I worked out that checkCanAct() needed an if-statement on the acted flag that throws when the staff member has already acted.

4. I decided my class diagram should show only my own classes, with my teammates' classes as named boxes.

5. I raised the question of when using AI to write code becomes cheating, and noted that team GitHub work often meant waiting for teammates' merges.

Identify the key facts generated by the GAI tools and briefly describe how you have verified them.

1. Claude summarised the brief's rules and worked out prices from them, such as $13.50 for a VIP Burger, $24.30 for the Salad + Pasta combo and $19.44 for that combo during Happy Hour. I checked each one against the brief's worked examples and did the arithmetic by hand.

2. Claude wrote code in my area, including Restaurant, Waiter, readChoice(), Host and the ConsoleUI displays. It ran the check classes in testing/ in my session, and I read the output: all 17 check classes pass with 0 FAIL.

3. Claude reported the replay results, such as 5 paid, $75.24 and an average of 83 for the Stage 3 victory run. I compared these with the saved output files in testing/ and with the numbers my team expected.

4. When Claude said what had been merged or tagged, I checked the pull requests and tags on GitHub.

5. Claude explained design points, such as why Host should not extend Waiter. I checked these against lecture Chapter 7 and the Week 5 SOLID tutorial.
